

Scalewatcher™ Nano

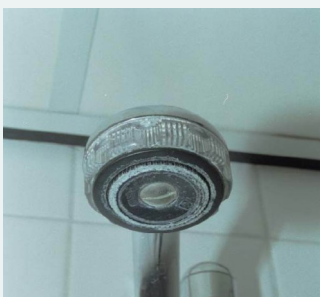

Electronic Hard Water Treatment System for your entire house

Only one Scalewatcher Nano installed on your water inlet takes the stress out of dealing with hard water.

Treated water

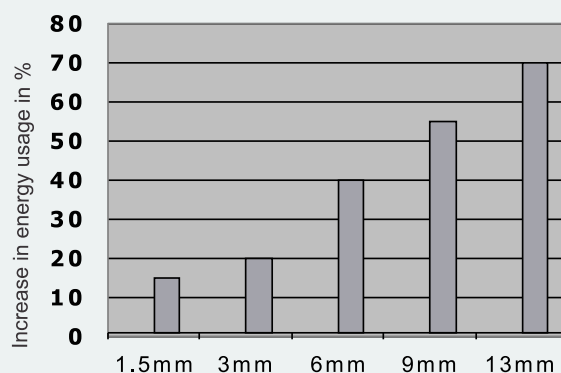

The benefits....

- 💧 Saves energy
- 💧 Descales your entire water system
- 💧 Prevents scale build up
- 💧 Gentle on skin and hair
- 💧 Extends filter life
- 💧 Saves on detergent

No more....

- X Clogged shower heads or faucets.
- X Itchy skin and dry hair
- X Scaled up pipes
- X Scaled up elements in your water heater
- X Dull dishes and glasses
- X Scaled up appliances
- X Stained bathrooms

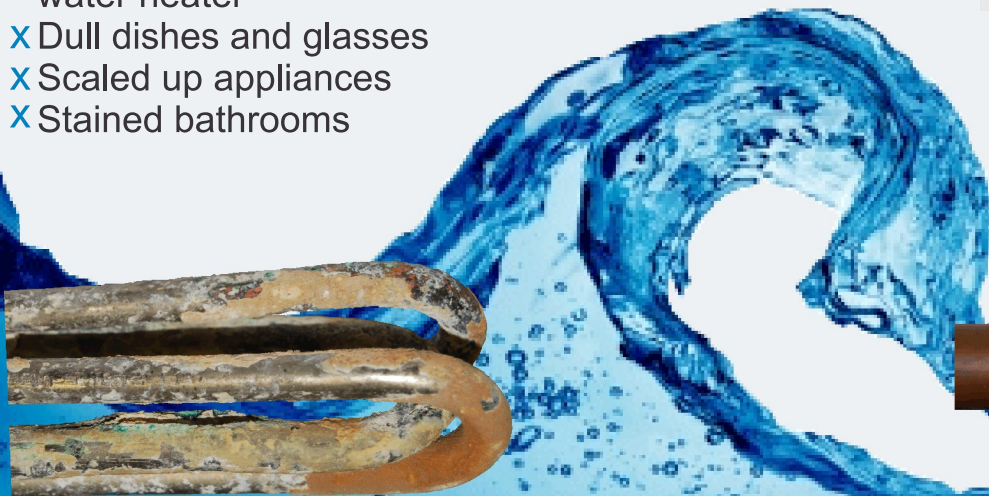

Thickness of scale layer

The cost of scale build up

Percentage increase in fuel costs due to scale build-up in average domestic water system. 0.24 Inch = 40% more

**NO SALT REQUIRED
STARTS WORKING IMMEDIATELY**

- ✓ Easy to install
- ✓ No plumbing required
- ✓ Chemical free
- ✓ Negligible energy consumption

Scalewatcher™ Nano

Electronic Hard Water Treatment System for your entire house

Specifications, Guarantees, Operating Principle

Specifications

Resin sealed electronics housed in a high impact thermoplastic enclosure
Works on 110-240 V
LED indicators show correct operation
Conforms to EEC manufacturing standards
Can be used in damp atmospheres
Dimensions: 4.9"x2.8"x1.5"/125x72x37 mm³
Weight unpacked: 3.9 OZ (110 Gram)
Power consumption: 6 Watt
Output voltage on signal cable: Non hazardous
Works best on municipal water supply.

Manufacturer's guarantee

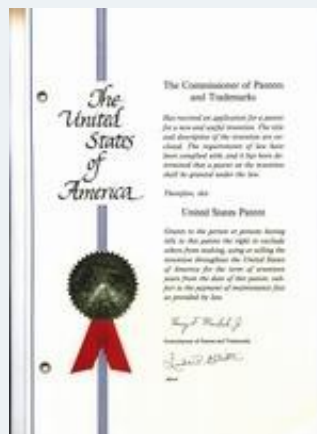

Two years on materials and workmanship. In the unlikely event the unit becomes defective, simply return it to your supplier for replacement.

Performance guarantee

If you are not satisfied with the performance of the product after three months continuous use, the purchase price will be refunded if the unit is returned within a period of four months since the date of purchase.

Operating principle

Hard lime scale is caused by mineral ions. The treatment causes the dissolved mineral ions to form crystals which become suspended in the bulk of the water instead of forming hard scale deposits on the surface of a pipe wall or shower head. These crystals flow with the water and will not adhere to any surface as long as the water flows. Old hard rock scale layers will be gradually dissolved and removed by the treatment and force of the flow rate. This may take a few weeks to a few months depending on the scale thickness and the water usage. It is sufficient to install one unit at the water inlet pipe after the water meter and will then protect the whole house the minute it is installed.
