

**Hospitality Sector Scalewatcher™**

# Scale is no problem anymore

***With the Scalewatcher™ for the hospitality sector, you can really cut down on working hours and save on chemical cleaning agents.***

***Bathrooms in your hotel or the kitchen in your restaurant: every day, people here and in many other hotels and catering situations use hundreds of litres of***

***water. The resulting maintenance forms an important part of your total operating costs. Especially in areas with hard tap water, Calcium deposits mean a lot of extra work – and we are not even counting what you pay for those aggressive cleaning agents.***

▶ The Scalewatcher™ rescues bathrooms from that hazy layer and prevents those spots where Calcium deposits can build up on the bathroom fixtures, tiles and shower walls after every shower. Even taps and shower-heads stay shiny and free of obstructions.

▶ In the kitchen, there is less need to clean and take apart your professional equipment. The little tubes and pipes in such things as hot-air blowers or steaming equipment do not get clogged, and your stainless steel surfaces stay shiny longer.

▶ The coffee and tea machines require substantially less maintenance. The cups and glasses are also easier to clean. What is more, the Scalewatcher™ ensures a reduction in Calcium deposits in your hot-water equipment. Boilers and central hot-water heaters perform better, and the water temperature remains constant at lower cost because of higher efficiency.
