RE: Performance of the Scalewatcher system

We have a 35,000 SF facility in an area of very hard water with about 18 grains of hardness.

In October 2004 we acquired a Scalewatcher model CM2 from Aqua Genesis Co. which is treating all the water that comes into our facility.

Since the Scalewatcher was installed we have not experienced any events of scaling around our many faucets and sinks. We have no evidence of scale anywhere in our facility and our large water heater seems to be operating at full efficiency.

When we saw the results of Scalewatcher in our general water system we decided to install a similar unit to treat our radiant heating system to prevent any scaling inside the circuit.

We are very pleased with the products and the service received from Aqua Genesis.
