The Natural Cool

The Scalewatcher

In November 2013, York Ice Co., Inc. installed a Scalewatcher from Scalewatcher North America, Inc. on two of our three incoming water lines to our ice makers. After a year of use, we were so impressed that we ordered another Scalewatcher for our other incoming water lines.

York Ice has battled scale build-up for years on our icemakers, water lines and evaporative condensers. The Scalewatcher has been amazing as it has not only kept our systems from scaling up but also has reduced the scale build-up that had accumulated for years on our systems.

Our facility manager and maintenance staff were all skeptical that the Scalewatcher would work. After multiple conversations with the team at Scalewatcher and a six month money back guarantee, York Ice gave it a try. The Scalewatcher is simple to install and environmentally friendly. York Ice no longer has to use harsh chemicals to clean the scale off our ice makers plus there is also no down time during our busy summer months.

Every ice company should be using this amazing tool.
