

INFORMATION

REFERENCE : HIME 40
COMPANY : BIG MINING – VOTORANTIN METAIS
DATE : Lima, 25th April 2009

Our customer VOTORANTIN METAIS PERU is a big mining company in Lima – Peru. They had severe problems with hard scale in 12” pipes and two heat exchangers. Every month it was necessary to stop production to clean with water under pressure when the scale layer became more than 4”. Production had to be stopped for about four hours.

At the end of January one HIME 40 was installed with the help of Mr. Golf, representing Scalewatcher (Thailand) Co., LTD

Until the end of April the pipes were opened three times to see the results. The customer was very surprised because in a few months the scale became very soft and they had to stop production for only one hour. The customer is convinced the Scalewatcher is working and is happy with the performance. A detailed report is to follow.

Think Votorantin will give me a formal letter confirming the excellent results and will give new orders for all their mining facilities.

Thank you at Scalewatcher Company for the product.

Regards
Luis Parra
LIMA PERU
