Dear Scalewatcher,

We live in an area that has extremely high minerals in our water, 100 grains per gallon. We purchased the Scalewatcher ten years ago; we are so glad we did.

Over the years I've had to cut into various pipes to add new lines etc. The pipes had NO scale coating in the pipes; they were clean and smooth.

The most notable difference is seen with my drip irrigation lines. I have 1,500 linear feet of drip lines with over 1600 emitters. Without Scalewatcher, they plug quickly with minerals. With Scalewatcher the lines and emitters are clean and free flowing.

I have included two pictures to prove my statement. One is before Scalewatcher, the other is after Scalewatcher.

Thank you for a much appreciated, useful product.

Sincerely  
Darrell Rue  
Tularosa, NM
